2Way Release Notes - 3.8.2020

Backend v1.92 (Backend only release)

Indicates changes from previous release notes.

Improvements and updates - *Backend*

▸ **Clients member base API's retry mechanism** - Update to the mechanism that sends updates to the client member base. Now few attempts are needed before triggering an alert versus one attempt before.

▸ **Editing a member** within Users now **saves the state** rather than returning to default view upon saving.

▸ Added API's for marking documents as read to show across devices. (to be used in the upcoming v3 of the app)

▸ **Comments for reports no longer has a limit on number** of characters to be used

▸ (Multi factor authentication (MFA) mechanism updated

▸ **Label changes** across the backend for the following:

    ▸ *Airline group* changed to ***Group***

    ▸ *Airline code* changed to ***Group code***

    ▸ *Rank changed* to ***Position/Rank***

▸ In Destinations, "Flight numbers" module was removed as it serves no purpose any more.

▸ Survey list API updated to reflect new status to be used in app v3.0

▸ In All Users, the UI for the table updated to be more clear how the table is being sorted.

▸ Preparation for a PHP version update to be carried out in next backend version release.

Fixes

▸ Fixed. Email reports were being received for reports with final status.

▸ Fixed. Issues with adding a document from backend CK editor server

▸ Fixed. In rare cases, contact details were temporarily hidden after disabling and then enabling contact info in app.

▸ Fixed. Group code column in Users set to fixed width.

Supported operating systems

▸ iOs 10 and up

▸ Android 5.0 (Lollipop) and up
