

App v3.1 and Backend v1.94

NEW

- ▶ **Shortcuts page.** In the Quick action bar at bottom of the screen we've added a "star" for users to access the "Shortcuts page." This new feature allows users to mark a content they want to readily available in the shortcut page. For now, content in News, Journals, Events and Submitted reports can be added in Shortcuts. More module content will be made available to mark in this way in future updates. See screenshot below.
- ▶ **Membership card.** On the main menu a green icon is now displayed next to the member name. Pressing that reveals the Membership card. A corresponding NEW Membership tab has been added in the backend under Users/Membership Card.
The details to be shown on the card are all customizable by each client and information is pulled from the members info in the Users table. NOTE - to enable the Membership card, admin needs to enable it in the backend tab. See screenshot below.

Improvements/Changes - App

- ▶ **Initial login performance improvement** - The overall API structure (the connections from app to backend) were all reviewed, updated and simplified. This overhaul decreased loading time considerably. Loading time differs between clients and depends on numbers of users, content and customized solutions in place. As an example, a loading time that was before over one minute is now approx. 15 sec.
- ▶ **Survey description text** - On the first screen of Survey there is a description text for the survey/poll in question. The character limit for that text was increased to 1000 characters.

Improvements/Changes - Backend

- ▶ **Client admin** - When client admin was changed to a different one it affected the whole history of actions taken by the previous admin. We have now implemented a feature so that when there is a change in Admin, a changeover occurs that does not affect the action history of previous admin. For example, if admin A was assigned as such from 1jan-31dec2020, all comments and actions remain intact for that period.
NOTE - to assign a new admin you must contact 2Way, otherwise the changeover does not occur. Each admin can still update his/hers details in profile view when logged in.
- ▶ **System generated email delivery.** Emails received when resetting passwords, getting and OTP for initial login or moderators receiving email reports we refer to as "system emails". These email were sometimes not delivered and specially to email services like hotmail. We have now purchased a service that allowed us to implement a dedicated IP

address to our outgoing system emails. We have now been using this service for 3 weeks and delivery ratio for that time is now at 100%.

Fixes

- ▶ Fixed. Survey was not correctly shown on Activity feed
- ▶ Fixed. When clicking notifications in the Notification tab in app caused a "Content not available" popup to appear.
- ▶ Fixed. In few Android phone types, Activity feed became randomly empty on rare occasion and then reappearing.
- ▶ Fixed. When documents were attached with content and were not previously available in Documents tab, on occasion were not available until the second visit to content. (Fixed in v3.01)
- ▶ Fixed. **Chrome browser showing site not secure** - On two occasions the Chrome browser, and others for a time as well, started showing the backend web page as not secure. Stating the site might be a "phishing" site. After it happened for a second time we did engage again in a dialogue with Google engineers and found out that some minor 3rd party plugin that 2Way was no longer using was causing all this havoc. This plugin had expired. What this triggered us to do is set up a more frequent overviews of our backend site to check that all plugins are in place and certificates are valid. More frequent and regular "house cleaning." (BE)

Supported operating systems

- ▶ iOS 11 and up
- ▶ Android 6.0 (Marshmallow) and up

Shortcuts page

- A "star" has been added at bottom bar to access the Shortcuts page
- For now, News, Journal, Events and Reports submitted can be added to Shortcuts. More will follow.
- By selecting the "star" within the respective module, adds the content to the Shortcut page

Membership card

- All fields are customizable except member name and image, which is optionally enabled in the backend.
- Rest of fields are optional and represent fields in the User table.
- In the backend, a new tab under Users has been added.
- QR code or bar code can be added to show at bottom.
